Aphiscout Parasitic Wasp Blend - Application Instructions

Please use immediately upon receipt

Required conditions:

- Temperature: must be between 16–30°C
- Insecticides: Do not apply if insecticides have been used in the past 1-2 weeks

Before application:

- Take down any sticky traps before releasing the parasitic wasps

Application:

- Use immediately and do not store
- Keep out of direct sunlight
- Open the lid of the container and allow wasps to gradually hatch and fly out
- The container can be placed near plants, or hung on stems
- Leave the container in place for 2 weeks before removing
- Do not use any insecticides once the parasites have been applied
- Repeat applications will see best results

Next Steps:

- Look out for mummified aphids on the leaves and stems of plants. This shows that the parasites are active
- Consider applying Aphiscout on a regular program as a preventative method throughout the growing season. Contact Dragonfli directly to set this up.
- Introduce new units every 2 weeks
