Amblyseius Swirskii - Control Thrip Larvae & Whitefly Eggs - Application Instructions

Please use immediately upon receipt

Required conditions:

- Temperature range: above 20°C
- Humidity: 70% (lower humidity will not kill the *swirskii* but will reduce reproduction)
- Insecticides: Do not apply *swirskii* if insecticides were applied in the past 1-2 weeks

Before application:

- Prune any heavily damaged leaves
- Do not open the sachets. The sachets already contain an emergence hole

Application:

- Use all of the sachets at once and do not store
- Hang the sachets onto plant stems, or leaves, at a rate of 1-2 per plant
- Hang the sachets out of direct sunlight
- Do not use any insecticides once predators have been applied
- The sachets will release predators for 4 weeks

Next Steps:

- Observe Thrip activity during the 4 week life cycle of the sachet and ensure to replace them to continue protection
- If Thrip numbers rapidly increase, switch to a curative application of our loose ***Amblyseius swirskii*** or ***Amblyseius cucumeris***
