Slug Killer Nematodes (*Phasmarhabditis californica*) - Application Instructions

Required conditions:

- Soil temperature must be above 5°C
- Do not apply in bright sunshine as nematodes are U.V. sensitive
- Ensure the application area is watered and moist before applying the nematodes

Application:

30-40sqm (1 Sachet):

- Cut open the sachet with scissors and mix the contents into **1 Litre** of lukewarm water
- Stir the solution until all carrier contents are dissolved. Now you have your nematode concentrate
- Take **333ml** of concentrate and pour into a watering can. Top up with water until you reach **10 Litres**
- 1 Litre of nematode concentrate provides enough solution for to make up **3 watering cans** of 10 litres
- Pour and apply the Slug Killer Nematode solution over the soil / compost area you wish to treat
- One watering can of 10 Litres should treat an area of up to **10 square metres**
- Slug Killer Nematodes can also be applied with our **Nema Super Sprayer**

70sqm (2 Sachets) / 90sqm (3 Sachets):

- Apply each of your sachets following the above application instructions

Storage:

- Unopened packs can be fridge stored at 4°C for 3 days. Use as soon as possible for best results

Next Steps:

- Keep application area moist for 2 weeks after applying nematodes
- Repeat applications may be required for severe infestations
- See also our **Ferrimax Organic Slug Pellets** for effective control over Slugs & Snails. The pellets can be safely applied in conjunction with the Slug Killer Nematodes
- Consider our **Soil Boost** biostimulant to add beneficial microbials to soils, improving root and plant health and ensuring better plant defence against Slugs & Snails
