

# Chafer Grub Killer

Beneficial Nematodes

- Natural control of Chafer grubs
  - Applied with water
- Contains 25 million nematodes
  - Treats up to 50sqm

# Chafer Grub Killer

Beneficial Nematodes

Application periods

- Please read inside of pack for detailed application information
- Use nematodes on receipt or fridge store (do not freeze)
  - Do not fridge store longer than use by date
- Chafer Grub Killer is safe for children, pets and wildlife

For more information, please visit [www.dragonfli.co.uk](http://www.dragonfli.co.uk)

# Chafer Grub Killer

## Beneficial Nematodes

Chafer Grub Killer provides a biological control solution for chafer grubs in lawns using entomopathogenic nematodes (*Heterorhabditis bacteriophora*). Nematodes are living organisms that can be used to control insect pests including Chafer grubs. These grubs are the larvae of Chafer beetles. Damage to lawns is caused by the larvae feeding on grass roots, which can lead to yellowing areas of grass. Secondary damage is often caused by animals and birds attracted to lawns to feed on the Chafer grubs. Severe damage can be caused by animals ripping up areas of lawn. Chafer grub Killer nematodes provide a safe, natural solution for control of Chafer grubs. Nematodes enter the grubs via a natural opening like the mouth and feed on the contents of the Chafer grub. They release a natural bacterium inside the Chafer grub, which kills it. Infected grubs will often change colour and will be completely broken down by the nematodes. Chafer Grub Killer nematodes have no negative effects on plants, humans, birds, fish or mammals. The optimum time for applying Chafer Grub Killer is when Chafer grubs are close to the soil surface between July-October when the soil is warm.

Chafer Grub Killer can be applied with watering cans, Hose end sprayer nematode applicators or sprayers. If using hose end applicators, read the manufacturer instructions and if applying with sprayers, take out any filters prior to use.

## Preparation prior to application

- For best results apply nematodes between July-October.
- For severe infestations, apply two applications, two weeks apart.
- Scarify or spike lawn area, if grass thatch is thick, this will aid passage of nematodes into the soil.
- Cut grass prior to application.
- Soil should be moist at application and water treated areas after application.
- Apply on dull or wet days, avoid application on bright days, as nematodes are U.V sensitive.
- Soil temperature should be 12.c plus for nematode activity.

## Application

- Open nematode sachet and empty entire contents into a bucket of 2.5 litres of water to create nematode concentrate solution.
- Stir thoroughly to break up and dissolve carrier material.
- Add 0.5 litre of nematode concentrate solution to an 8 litre watering can and fill with water.
- Using a coarse rose apply contents to an area of 10 square metres.
- One pack will make 5 watering cans to treat an area up to 50 square metres.
- If applying to pots, make sure nematode solution reaches root zone at the bottom of the pots.
- Use all the contents of the pack once opened and do not store made up concentrate solution.
- Nematodes can also be applied with some hose end feeder /nematode applicators and sprayers.

## Post application

- Ensure lawn area is moist for up to 2 weeks after application.

# Chafer Grub Killer

Beneficial Nematodes

- Natural control of Chafer grubs
  - Applied with water
- Contains 50 million nematodes
- Treats up to 100sqm

# Chafer Grub Killer

Beneficial Nematodes

## Application periods

- Please read inside of pack for detailed application information
- \*Spring application needs to be repeated in the summer
- Use nematodes on receipt or fridge store (do not freeze)
  - Do not fridge store longer than use by date
- Chafer grub Killer is safe for children, pets and wildlife

## Preparation prior to application

- For best results apply nematodes between July-October.
- Spring applications should be repeated late summer/early autumn.
- For severe infestations, apply two applications, two weeks apart.
- Scarify or spike lawn area, if grass thatch is thick, this will aid passage of nematodes into the soil.
- Cut grass prior to application.
- Soil should be moist at application and water treated areas after application.
- Apply on dull or wet days, avoid application on bright days, as nematodes are U.V sensitive.
- Soil temperature should be 12.c plus for nematode activity.

## Application

- Open nematode sachet and empty entire contents into a bucket of 5 litres of water to create nematode concentrate solution.
- Stir thoroughly to break up and dissolve carrier material.
- Add 0.5 litre of nematode concentrate solution to an 8 litre watering can and fill with water.
- Using a coarse rose apply contents to an area of 10 square metres.
- One pack will make 10 watering cans to treat an area up to 100 square metres.
- Use all the contents of the pack once opened and do not store made up concentrate solution.
- Nematodes can also be applied with some hose end feeder/nematode applicators and sprayers.

## Post application

- Ensure lawn area is moist for up to 2 weeks after application.

Premium Biostimulant

For lawn recovery

dragonfli

# Lawn Grub Repair Boost

Premium Biostimulant

- Natural plant based lawn repair kit
- Helps lawns recover from chafer grub and Leatherjacket damage
  - Aids root and above ground lawn growth
  - Can be applied with nematode treatments
    - Improves soil microbial life
  - Includes seaweed and plant extracts

500ml

dragonfli

# Lawn Grub Repair Boost

Premium Biostimulant

Natural biostimulant containing seaweed and plant extracts. Stimulates soil life around the roots and improves growth of roots and top growth. Improves nutrient uptake and encourages healthy lawn growth. Ideal aid to help lawns recover from attack by soil borne grubs such as chafer grub and Leatherjackets.

## Directions for use

- Shake bottle thoroughly
- Dilute 50 ml into 10 litres of water
- Apply 10 litres of water to 5 square metres of ground
  - Apply every 7 days for 2-3 applications
  - Ensure the diluted product reaches the root zone
- Soil conditioners like NemAssist lawn can be added to aid transport of solution to root zone
  - Can be applied with lawn grub control nematodes

## Precautions

- Wash hands after use, avoid contact with eyes and skin, do not drink or swallow
