Fig-Leaf Skeletoniser Moth Killer Nematodes - Application Instructions

Please use immediately upon receipt

Required conditions:

- Apply when Fig-Leaf Skeletoniser caterpillars are present on plants
- Apply on dull or wet days, and not on bright days as nematodes are U.V. sensitive
- Humidity & moisture aid nematode activity on surfaces, so apply early or late in the day

Application:

35sqm (1 Sachet):

- Open nematode sachet and empty entire contents into a bucket of 2.5L of water
- Stir thoroughly to break up and dissolve carrier material
- Remove any filters in sprayers to prevent nematodes getting caught in the filter
- Add nematode concentrate to sprayer and add 5.5L of water to make 8L, then stir
- Spray nematode solution directly onto visible Fig-Leaf Skeletoniser caterpillars
- One nematode sachet will treat an area of plants up to 35sqm
- Use all of the contents of the pack once opened. Made up solution cannot be stored
- The nematodes can also be applied with some hose end feeder / nematode applicators & sprayers such as our **Nema Super Sprayer**

70sqm (2 Sachets):

- Apply each of your two sachets following the above application instructions

Storage:

- If you cannot apply immediately, store in the fridge (4°C) and use as soon as possible
- Do not freeze the nematodes

Next Steps:

- Check for any new Fig-Leaf Skeletoniser caterpillars and repeat treatment if required
