***Hypoaspis* sp (*Stratiolaelaps scimitus*) For Preventative Control Of Small Soil Dwelling Pest Larvae - Application Instructions**

**Please use immediately upon receipt**

**Required conditions:**

- Temperature: Soil temperature above 15°C
- Apply in moist soil, ideally soil rich with organic material and of loose composition
- Insecticides: Do not apply *Hypoaspis* if insecticides have been used in the past 1-2 weeks

**Before application:**

- Carefully rotate the bottle to evenly distribute the predators through the carrier material
- Ensure soil is moist before applying the predators

**Application:**

- Once opened, apply all of the material and do not store
- Spread material evenly on soil, or rockwool blocks
- Do not apply in pothole close to stem
- Do not use any insecticides once predators have been applied

**Next Steps:**

- Observe pest levels over the next 7-10 days
- Apply additional predators if the pest larvae are still present
- Alternatively, consider applying *Hypoaspis* in a preventative system. Apply once every 4 weeks to avoid pest build ups
