Ladybird Adults Application Instructions

Please use immediately upon receipt

Required conditions:

- Temperature range: **10°C+**
- Do not apply Ladybirds if insecticides have been used in the past 1-2 weeks

Before application:

- Allow the Ladybirds to settle for a few minutes at room temperature
- Ladybirds are most effective when applied in greenhouses or polytunnels
- Note that Ladybirds are not an effective solution for Spider Mite or Thrip infestations. Dragonfli offer specific predators for these pests, simply visit the 'Spider Mite' or 'Thrip' pest sections on our website for more information

Application:

- Apply all of the Ladybirds. Ladybirds are not suitable for storage
- Carefully pour (or use a paintbrush to lightly brush the Ladybirds) onto the desired treatment areas.
- Try to apply the Ladybirds directly onto the Aphid infestation hot spots
- Do not use any insecticides once the predators have been applied

Next Steps:

- Observe Aphid pest levels over the next 3 weeks and apply more ladybirds if populations remain high
