Lawn Flea Killer Nematodes

Application Instructions

Please use immediately upon receipt for best results

Required conditions:

- Soil temperature: 10°C+
- Expect better results if lawns have been scarified and tined before application
- Do not apply the nematodes in bright sunshine as nematodes are U.V sensitive
- Ensure the lawn is watered and moist before applying nematodes

Application:

50sqm pack (2 sachets of 25 million nematodes) / 100sqm pack (4 sachets)

- Open 1 nematode sachet and empty entire contents into a bucket of 2.5L of water
- Stir thoroughly to break up and dissolve carrier material
- Remove any filters in sprayers to prevent nematodes getting caught in the filter
- Add nematode concentrate to sprayer and add 5.5L of water to make 8L, then stir
- One nematode sachet will treat an area of lawn up to 50sqm. Apply the second sachet 7 days after the first for a follow-up treatment
- For the treatment of 100sqm: Apply two sachets following these instructions to treat 100sqm. Apply the remaining two sachets 7 days after the first for a follow-up treatment
- Use all contents of the packs once opened. Made up solution cannot be stored
- The nematodes can also be applied with some hose end feeder / nematode applicators & sprayers such as our **Nema Super Sprayer** or **Nema T-Pot**

Storage:

- Nematodes can be fridge stored at 4°C for a short while
- Do not freeze nematodes

Next Steps:

- Continue to keep the lawn moist for 2 weeks after application
- Repeat applications may be required for severe infestations
- To repair damaged turf apply our **Lawn Grub Repair Boost** biostimulant
