Pantry Moth Pheromone Trap Application Instructions

Required conditions:

- For indoor use only

Before application:

- If you are also using our Moth Egg Killer Sachets, ensure the trap is placed a distance from the sachets so the parasitic wasps do not get stuck in the trap
- Keep any unopened pheromone lures in the fridge or freezer when not required

Application:

- Push the trap together to form a tent-like structure, and peel off the paper inside to reveal the sticky surface
- Open the foil lure sachet, remove the pheromone lure and place it inside the trap
- The male Pantry Moths will then be lured into the trap by the pheromone and caught on the sticky pads inside
- Traps can be placed, or hung, in any food storage areas. The trap is safe, effective and releases no odours

Next Steps:

- To keep the trap active, replace the first pheromone lure after six weeks and use the second lure provided. The trap is supplied with the two lures to provide you with a 12 week catching period.
- We strongly recommend combined use of Pantry Moth Traps and our Pantry Moth Egg Killer Sachets to ensure Pantry Moths are being controlled at both adult and egg life cycle stages.
